Belzona Polymerics Launches Water Tolerant Repair Product

Harrogate, England – (April 2008) Belzona Polymerics Limited, providing solutions to the fishing industry for over 55 years through industrial protective coatings and polymer repair composites, is presenting a cost effective solution to the repair of underwater equipment and areas subject to condensation or splashing.

Utilising innovative technology, Belzona® 1831 (Super UW Metal) is a highly adhesive two component polymer repair composite that can be used for cold bonding and the sealing of water leaks in containment areas, pipes and other equipment operating in wet environments.

This surface tolerant rebuild paste grade material can be applied on to damp or wet surfaces and eliminates the need for specialist tools. It has good chemical resistance and can be applied in situ, reducing downtime and costly replacement of parts.

The Belzona product range is manufactured to stringent quality and environmental control guidelines complying with the internationally recognised requirements of ISO 9001:2000 and ISO 14001:2004.

About Belzona Polymerics Ltd.

Manufacturer of industrial protective coatings and repair composites since 1952, Belzona provides a wide variety of applications to rebuild, repair and maintain machinery, equipment and building structures. Belzona's local on-site Technical Consultants analyze the situation, recommend the solution, and supervise the application. With their Global Distribution Network covering over 120 countries and 24-hour Technical Support, Belzona is established in the forefront of industry by serving such markets as oil and gas, power, marine, and water/wastewater.
